

Grain: World Markets and Trade

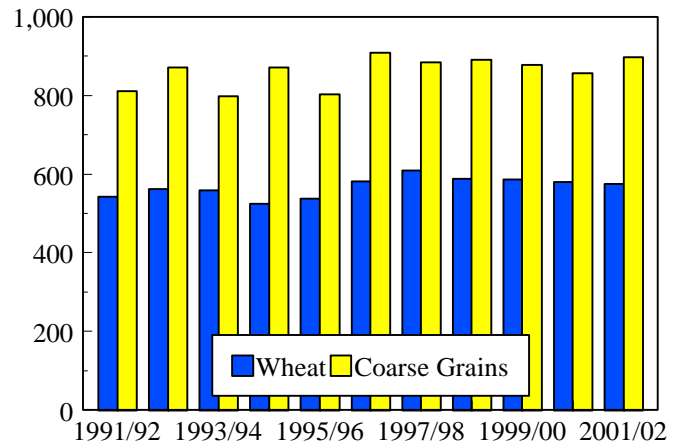

2001/02 Global Wheat and Coarse Grain Trade Diverge

Production Tells the Story

Trade

Production

Forecast wheat and coarse grain consumption has risen significantly over the past decade and is expected to reach record levels in 2001/02. Expanding wheat consumption is largely linked to growing populations while increased consumption of coarse grains is fueled by increasing meat consumption.

Coarse grain production is expected to rebound significantly and nearly keep pace with consumption. Both trade and stock levels are expected to drop slightly with declining Chinese corn stocks accounting for half of the decline in global corn stocks. Although total coarse grain trade is projected down, U.S. corn exports are forecast to increase 2 million tons because of reduced competition. While coarse grain production is nearly keeping pace with consumption, world wheat production is expected to ease slightly resulting in a global stock drawdown of 19 million tons. The United States accounts for 6.5 million tons of this drawdown, therefore, U.S. prices are expected to increase thereby making exports less competitive. Forecast 2001/02 world wheat trade is up nearly 2 million tons, but the U.S. is down 3 million.

Note: This report incorporates significant historical revisions in USDA estimates of China's domestic consumption and stocks of wheat, rice, and corn. A discussion of the revisions and a comparison of old and new estimates can be found in the World Agriculture Supply and Demand Estimates (WASDE) report which was published on May 10, 2001. Complete revisions to USDA grain supply and demand estimates for China are available at: <http://www.usda.gov/oce/waob/wasde/wasde.htm>.

SITUATION AND OUTLOOK: COMMENTARY AND CURRENT DATA

WORLD WHEAT SITUATION AND OUTLOOK

Global wheat trade in 2001/02 is projected to be 107.6 million tons, up 2 million tons from 2000/2001. Lower world production is expected as smaller crops in the United States, EU, and South Asia more than offset larger crops in Australia, Argentina, Eastern Europe, and the FSU. Decreased plantings and unfavorable weather conditions have reduced crops in the EU, United States, and South Asia. Lower internal prices in China have prompted producers to decrease acreage but overall Chinese production will be up marginally as yields rebound from last year's drought.

Global Wheat Use Exceeds Production for the Third Consecutive Year

Global consumption in 2001/02 is expected to rise by about 2.5 million tons to a record level. The growth is attributed to not only food use but also feed use as a result of abundant supplies in countries which traditionally export low quality wheat.

Import demand is forecast up marginally this year. Part of the increase is due to expected higher import needs in Pakistan resulting from a reduced crop. Though importing less, Brazil will likely remain the world's largest wheat importer, with Iran a close second due to continued drought. Australia, Argentina, and Canada are expected to boost exports. Ukraine and India are also forecast to be significant exporters. Meanwhile, the United States, EU, and Turkey are expected to export less mainly because of smaller crops.

Global stocks are forecast to fall year to year as consumption is expected to exceed production for a third consecutive year. Despite lower global stock levels, which are forecast at a 23.6 % stocks to use ratio down from 26.9 %, increased prices will be limited by relatively large but declining supplies in major exporting countries.

Exporters

Production in the **United States** is initially forecast to decline by about 7 million tons to its lowest level since 1988/89 because of lower seedings, higher rates of abandonment, and decreased yields. Relatively large stocks will be drawn down putting upward pressure on prices and making U.S. wheat less competitive globally. This, coupled with abundant exportable supplies in other major exporting countries, is expected to result in U.S. exports falling 3.0 million tons to 27 million.

Less planted area along with wet and cool growing conditions are expected to result in a smaller **European Union** crop. With potentially tighter supplies of good-quality, milling wheat and strong domestic demand for lower-priced feed-quality wheat, the Commission is likely to limit exports especially in the beginning of the season. The concern over potential rising prices could push exports to a 6-year low of 14 million tons.

Expanding acreage and more production in **Argentina** will mean increased exports to other destinations more than compensating for the weaker demand in Brazil. **Canada** is expected to produce another large crop leading to a 1 million ton increase in exports. Australia is forecast to increase production by 2.5 million tons which, combined with large carryin stocks, is expected to lead to exports of 2 million tons more than in 2000/01.

The government of India has indicated a need to reduce burdensome stocks by again encouraging exports. Though 5 million tons has been stated as the 2001/02 export goal, shipping constraints and concerns over quality are expected to limit exports to 3 million tons.

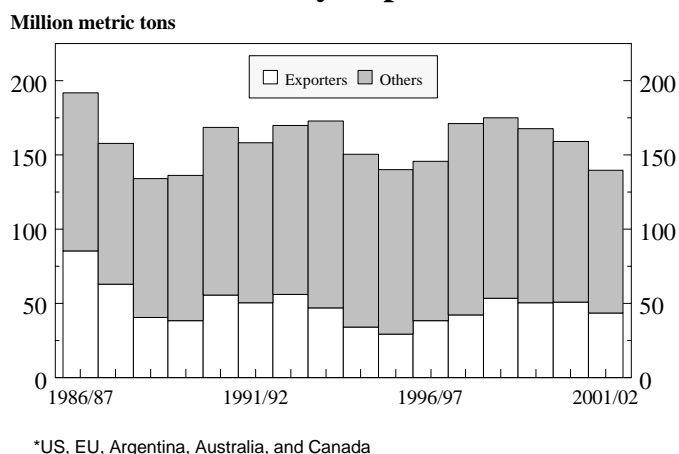

Due to improved crop prospects **Ukraine** is expected to increase exports nearly 2 million tons, largely to markets looking for competitively priced feed grains.

Importers

North Africa

Although drought is again hindering crops in **Algeria**, **Morocco**, and **Tunisia**, there has been some recovery in production prospects which is expected to lead to slightly fewer imports than last year's near-record level. **Egypt** imports are expected to fall slightly as production is forecast up while consumption remains stagnant.

Global Stocks Fall but Price Strengthening Will be Limited by Exporter Stocks

Middle East

Iran is forecast to import the same amount as last year, which is up 4.5 million tons from just 3 years ago, because of a third drought-impacted crop. Continuation of the U.N. oil-for-food agreement with **Iraq** is likely to keep their imports unchanged from a year earlier. Imports by the **United Arab Emirates** are expected to increase from the previous year's near-record despite uncertainty over opportunities to export flour.

Asia

China's crop is forecast up 2 million tons despite reduced acreage. Nevertheless, imports are expected to increase as consumption continues to outpace production thereby drawing down stocks. Total use is estimated to remain unchanged from last year.

Higher imports are expected for **Indonesia** and **Malaysia** due to continuing recovery of those economies from the recent financial crisis and availability of low-priced Indian wheat. Imports by **South Korea** and the **Philippines** are forecast up marginally from last year.

Pakistan's imports are expected to jump as consumption will outpace a lower more normal production level. Stocks are expected to fill the balance of the shortfall.

Former Soviet Union

Production in the region is forecast to increase nearly 8 million tons as a slightly smaller crop in **Kazakstan** is more than offset by larger crops in **Russia** and **Ukraine**. Imports in the region are consequently expected to fall by about 700,000 tons with Russia accounting for the majority of the drop.

NOTES: Footnotes appear on last page of this circular. Imports are reported on an international year basis. All other data are reported using marketing years.

WORLD RICE SITUATION AND OUTLOOK

Global rice trade for 2001 is projected at 22.6 million tons, nearly unchanged from the previous year. Global production (paddy basis) is forecast down 15.2 million tons to 592.4 million. Based on revisions to stocks and consumption in China and Vietnam, global ending stocks and global stocks to use ratios have been adjusted upward.

Rice exporting countries scramble to find markets for burdensome stocks as new rice is harvested from the fields. Trade is slow and the market undertone is quiet. Despite some upward fluctuation in price, Thai 100B is holding firm at \$170 per ton while Viet 5% increased slightly to \$147.

Export price quotes for U.S. long grain grade #2/4 percent have risen slightly to \$276 per ton (FAS), US Gulf sacked, while medium grain #1/4 California rice has fallen \$20 per ton to \$190, ex-spout Sacramento port.

Trade Changes in 2001

Selected Exporters

- ! **Burma** exports up 100,000 tons to 350,000 due to a stronger than expected export pace during the first quarter.
- ! **China** down 500,000 tons to 2.5 million based on slower than expected pace to date.
- ! **Thailand** up 400,000 tons to 6.7 million as strong exports outpace the previous year's level.

Trade Changes in 2000

Selected Exporters

- ! **Burma** exports down to 159,000 tons due to revisions in official Burmese government trade data.
- ! **Pakistan** up 26,000 tons to 2.026 millions tons based on 2000 year-end data.

Selected Importers

- ! **China, Ghana, Iraq, South Korea, Malaysia, and Sri Lanka** imports adjusted based on year-end data from Pakistan.
- ! **South Africa** up 50,000 tons to 525,000 based on updated trade data.

NOTES: Footnotes appear on last page of this circular. Production is on a rough basis; all other data are reported on a milled basis.

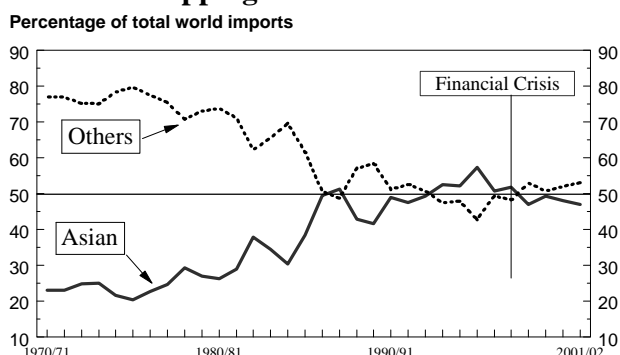

WORLD COARSE GRAINS SITUATION AND OUTLOOK

World coarse grain trade is projected down more than one million tons to 99.7 million tons in 2001/02. World production is expected to rebound from its five year low as bigger crops are anticipated in most regions of the world except the former Soviet Union. Global consumption is expected to continue to slightly outpace production and carryout stocks are forecast to fall. US corn, China corn, and EU barley are forecast to comprise nearly two-thirds of world coarse grain stocks. Although the US corn crop is expected to be smaller than last year, consumption is expected to decline so stocks are estimated to drop only marginally. Chinese corn production is forecast to recover from the 2000/01 drought-reduced level but with consumption forecast up to record levels stocks will continue to fall.

Corn trade is forecast down slightly in 2001/02 as production is expected to rebound in several important importing areas including Eastern Europe and Mexico. Global consumption is forecast at a record high. U.S. exports will continue to face strong competition from its traditional competitors, Argentina and China, and from a new competitor Brazil. Imports are forecast down in Asia, the world's largest regional corn importer, as consumption continues to ebb. Middle East and North African imports are fueled by expanding poultry operations and snack food industries.

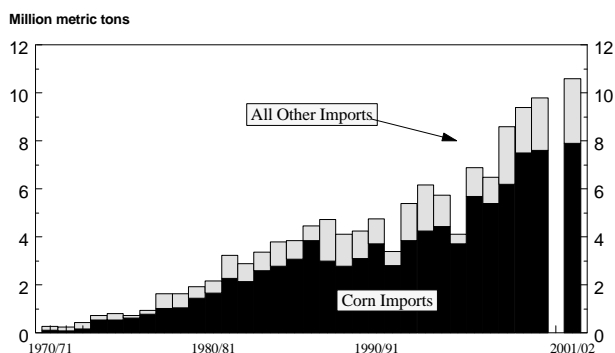

Barley trade is forecast to rise only slightly although limited rains and inadequate subsoil moisture in North Africa continue to limit production and reduce pasture areas. Poor weather and delayed plantings are expected to reduce EU

Asian Markets Comprised More than 50% of Global Corn Imports in the Early 1990s ...Slipping to 47% in 2001/02

production slightly, and with small intervention stocks, exports are expected to remain flat. Lower exports by the U.S., Turkey, and the Ukraine, will leave room for larger sales by Australia and Canada, which are expected to have bigger crops. Like corn, global barley consumption is expected to outpace production for the fourth straight year and stocks are expected to be reduced again this year.

North African Coarse Grain Import Growth Only Bright Spot in 2001/02

Exporters

United States corn production is forecast down nearly 10 million tons but carryout stocks are forecast to decline only 2 million tons from 2000/2001. As a result, global prices are expected to remain relatively flat. Exports of corn are forecast up 2 million tons to 49.5 million tons. **United States barley** exports are forecast down by

350,000 tons to 650,000 due to the prospect of tighter supplies. **Sorghum exports** are expected to increase as Mexican imports are forecast to continue at last year's pace.

China corn exports are forecast down 2 million tons to 5 million from 2000/2001 as lower expected world prices and more competition is expected to discourage the Chinese from engaging in a large export program.

Argentina corn exports are down 500,000 to 12 million tons from 2000/2001 as this year's smaller crop will impact the 2001/02 Oct/Sept year.

Brazil will be a net **corn** exporter again in 2001/02, exporting 1 million tons which is half of the 2000/01 amount.

The **European Union** is expected to remain the largest barley exporter at 9 million tons and is expected to continue its no subsidy policy. Due to larger crops, **Australia** and **Canada** barley exports are expected to expand slightly to 3.9 and 2.5 million tons respectively.

Importers

Asia

Overall Asian import demand is expected to fall slightly in 2001/02. Lower feed needs resulting from the January 2001 WTO beef import liberalization in **South Korea** is expected to result in lower corn imports. **Japan** corn is expected to ease slightly as the domestic trend toward imported meat continues. **Malaysia** is expected to import more corn to fuel its expanding domestic poultry industries as it continues to recover from the Asia crisis. **Taiwan** is expected to have flat consumption, but steady import needs.

Middle East and North Africa

North Africa barley imports are forecast to increase 25% from 2000/01 levels as limited rains and inadequate subsoil moisture continue to reduce production and pasture areas. **Egypt corn** imports are expected to increase marginally to 4.8 million tons as higher corn imports fuel the poultry industry.

Latin America

Mexico corn imports are expected to be flat at 6 million tons, as another record corn crop is expected to keep import licenses at bay as feed millers are required to use local corn first. **Mexico sorghum** is expected to increase 200,000 tons to 4 million as sorghum is expected to be competitive with corn again. **Brazil corn** imports are forecast down 400,000 tons to 200,000 tons as they continue to export stocks from last year's record crop. Consumption gains in the rest of **Latin America** will be filled almost entirely by production gains.

Notes:

Wheat trade year statistics are on July/June years. Barley, corn, sorghum, rye, and oats trade year statistics are on Oct/Sept years. Rice statistics are rough basis; trade year statistics are for subsequent calendar year. Rounding errors in conversion from international units causes some discrepancies with World Board Supply and Demand Estimates.

Notes:

Stocks, exports, and consumption are expressed on a milled basis in marketing years. Trade is on a milled basis in calendar years. "Stocks as a Percent of Consumption" represents the ratio of marketing year ending stocks to total consumption. Trade year statistics since 1979/80 exclude intra-EU trade.

ENDNOTES TO GRAIN: WORLD MARKETS AND TRADE

REGIONAL TABLES

- 1) Includes Canada, Mexico, and the United States.
- 2) Includes Central America, the Caribbean, and South America.
- 3) Includes Azores, Cyprus, Iceland, Malta & Gozo, Norway, and Switzerland.
- 4) Includes Albania, Bulgaria, Czech Republic, Hungary, Poland, Romania, Slovakia, and former Yugoslavia.
- 5) Includes Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen.
- 6) Includes Algeria, Egypt, Libya, Morocco, and Tunisia.
- 7) Includes all other African countries except North Africa.
- 8) Includes Afghanistan, Bangladesh, Bhutan, India, Nepal, Pakistan, and Sri Lanka.
- 9) Includes all other Asian countries except South Asia.
- 10) Includes Australia, Fiji, New Zealand, and Papua New Guinea.

OTHER NOTES

Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Current and historical data on the European Union in this issue refers to the EU-15.

Consumption statistics reflect total utilization, including food, feed, seed, and differences in marketing year imports and marketing year exports.

This circular was prepared by the Grain and Feed Division, Commodity and Marketing Programs, Foreign Agricultural Service, USDA, Washington DC 20250. Information is gathered from official statistics of foreign governments and other foreign source materials, reports of U.S. agricultural attaches and Foreign Service officers, results of office research, and related information. Further information may be obtained by writing the division or telephoning (202) 720-6219.

Note: The previous report in this series was the Grain: World Markets and Trade Foreign Agricultural Service Circular FG 04-01 April 2001. For further details on world grain production see World Agricultural Production, Foreign Agricultural Service Circular WAP 05-01 May 2001.

This circular is available in its entirety on the World Wide Web via the Foreign Agricultural Service Home Page. The address is:
