

Grain: World Markets and Trade

Smaller Canadian Grain Crops Create Opportunities for U.S. Corn

Canada's normal role as a major wheat and coarse grain exporter will be diminished this year because of poor harvests, and that will affect global trade patterns in wheat, barley, oats, and corn. Australian and European malting barley exports are expected to face much less competition from sharply lower Canadian export sales.

Tight supplies of Canadian quality milling oats have already helped push U.S. oats futures prices to the highest levels in more than 10 years. This may prompt imports from nontraditional countries and more EU sales at zero subsidy. Robust feed grain demand, combined with poor coarse grain crops, will lead Canada to import record levels of corn from the United States.

Foreign Countries' Policies and Programs

Barriers to Kazakhstan's Wheat Export Potential Are Crumbling

Limited production inputs, falling acreage, and poor grain transportation infrastructure have kept Kazak wheat exports in check since the fall of the Soviet Union. However, with these limiting factors being addressed, Kazakhstan could become an exporter of significant quantities of milling wheat to customers outside its traditional markets in the countries of the Former Soviet Union (FSU). Consequently this low-priced wheat will be very competitive and could result in some shift in trade patterns.

Kazakhstan was once a major wheat producing region of the Soviet Union, but production fell from more than 18 million tons in the early 1990's to less than 5 million in 1998. That plunge was due in large part to the sudden withdrawal of government subsidies in the production of wheat and livestock. With livestock production unlikely to rebound and domestic food use fairly level, exports are seen as a logical outlet for rising production.

Currently, the two main barriers limiting production are lack of investment in new equipment and in production inputs. The former is slowly being remedied by capital infusions from oil companies, government subsidies, and a better economic climate from the current oil boom. Meanwhile the use of fertilizer, which had been practically nonexistent, is on the rise with the government reportedly subsidizing 40% of its cost. The government is also considering partially subsidizing the cost of fuel, pesticides, and herbicides.

Improvements to the country's transportation infrastructure could also greatly affect future export levels. Kazakhstan is an exporter with high transportation costs. One solution could be using the Caspian Sea to move wheat to Iran, which in recent years has imported 6-7 million tons mostly from Canada, Australia, and the European Union. Other markets in the Middle East and North Africa can also be reached via the Caspian. The grain terminal at the port of Aktau, which was completed in May, has a capacity of 500,000 - 700,000 tons per year but is expected to handle only 250,000 tons this year. Most of this wheat is destined for Iran in the 6 months following harvest (Aug-Oct). However, the same company which constructed and owns the grain terminal

is planning to build several silos in the northern producing areas. It is expected they would provide Aktau with a year-round source of grain, expanding its export flow to near capacity. In addition, the government has stated that, depending on the success of the terminal, it may soon begin construction of another port and storage elevator 30 miles south which would be capable of storing 5 times the capacity of Aktau.

Nevertheless, one major obstacle to exporting wheat via the Caspian sea is the high cost of rail transport from the northeastern producing areas. Presently, wheat must be railed in a horseshoe-shaped pattern from the northern producing areas to the south and then over to the Caspian. However, the completion of a rail line in the next two years linking Kustanay with Aktyubinsk will cut the rail distance and freight costs considerably, making Kazak wheat more competitive on the world market.

With subsidized production inputs and the above-mentioned infrastructure improvements, exports are very likely to expand. In the last few years there have been small gains in exports to non-traditional markets, but these improvements create the potential for much larger sales beyond traditional FSU markets which have comprised about 90 percent of Kazak wheat exports. Iran has only taken small amounts in the past because of high transport costs and concerns over inconsistent quality. However, it could become a much larger market if the abundant wheat supplies could be cheaply delivered to the northern population areas, especially since Canadian, Australian, and EU wheat must be imported through the southern ports and expensively railed north.

Along with Canada and Australia, the United States would also be impacted by larger Kazak exports. With the United States' two major competitors attempting to compensate for lost market share in Iran, they would likely push wheat to other Middle Eastern and North African markets. With the infrastructure improvements, particularly the rail connection, Kazak wheat could also compete directly with the United States in the EU, Egypt, and other Mediterranean markets as that wheat could be delivered for less to the Russian border and then railed to the Black sea.

However, several hurdles still constrain Kazakstan's potential to become a major reliable exporter. These include unpredictable weather patterns, which in the absence of production inputs cause yields to fluctuate dramatically, inconsistent quality, lack of a reliable grain inspection system, competition from Russia, and questions regarding the government's long-term ability and commitment to subsidizing production inputs. Nevertheless, exporters doing business in the Middle East and North Africa should recognize Kazakhstan's export potential.

For more information, contact Oliver Flake at (202) 690-4200 or flakeo@fas.usda.gov.

SITUATION AND OUTLOOK: COMMENTARY AND CURRENT DATA

WORLD WHEAT SITUATION AND OUTLOOK

World wheat trade in 2001/02 is forecast to be 107.2 million tons, up 4.4 million tons from 2000/01. Global production is forecast down 7 million tons and is expected to remain below consumption for the third consecutive year. Global stocks are forecast to fall more than 20 million tons from last year to the lowest level since 1995/96.

In early November, export quotes for #2 HRW FOB Gulf averaged \$127/MT, up \$6 from last month. Global production is estimated up nearly 4 million tons from last month as larger harvests in Australia, Kazakhstan, and Russia are only partially offset by a smaller Argentine crop. Global consumption is forecast up 1.6 million tons, and ending stocks are forecast up 4 million tons. World wheat trade in 2001/02 is forecast slightly higher this month. Larger exports from Australia are largely offset by less from Argentina and the EU while fewer imports from Algeria are countered by more from the EU and Tunisia.

2001/2002 Trade Changes

Selected Exporters

- ◆ **Argentina** down 500,000 tons to 12 million based on reduced crop prospects.
- ◆ **Australia** up 1.5 million tons to 17.5 million due to a larger expected crop and large carry-in stocks.
- ◆ **EU** down 500,000 tons to 11.5 million based on the Commission's unwillingness to approve the export subsidies necessary to bridge the gap between relatively high domestic prices and lower-priced competitive supplies.

Selected Importers

- ◆ **Algeria** down 500,000 tons to 4.5 million based on an upward revision to the final crop.
- ◆ **Tunisia** up 300,000 to 1.5 million due to evidence of a smaller than expected harvest.
- ◆ **EU** up 500,000 tons to 5.5 million based on relatively high domestic prices, lower import duties, and abundant, cheap supplies from Eastern Europe and the FSU.

NOTES: Footnotes appear on last page of this circular. Imports are reported on an international year basis. All other data are reported using marketing years.

WORLD RICE SITUATION AND OUTLOOK

Global trade for 2002 is projected at 23 million tons, up 550,000 tons from last month's forecast and virtually unchanged from 2001's revised estimate. With consumption growth expected to outpace production, ending stocks are projected to drop 11 million tons to 126 million. China accounts for the bulk of the expected decline in global ending stocks.

Quotes from Bangkok reports are flat, but higher from Vietnam. Over the past four weeks, Thai export price quotes for 100B have averaged \$174 per ton, with a high of \$175 and a low of \$173; Viet 5% export price quotes have averaged \$181 per ton, with a high of \$186 and a low of \$176. Quotes for Paki 15/20% have fallen from last month's average of \$155 per ton to \$153 per ton.

Export price quotes for U.S. #2/4 have fallen again this month and are currently at \$213 per ton (FAS), US Gulf sacked. Price quotes for high quality medium grain have increased this month \$265 per ton ex-spout Sacramento port.

2002 Trade Changes

Selected Exporters

- ! **Burma** exports up 150,000 tons to 500,000 based on aggressive pricing by the Myanmar Produce Trading Agency and increased trade opportunities related to uncertainties about Pakistan exports.
- ! **India** up 500,000 tons to 1.5 million due to aggressive government sales to exporters combined with stronger anticipated West African demand for parboiled rice.
- ! **Pakistan** down 100,000 tons to 1.9 million based on logistical problems and higher war risk premiums related to the unstable situation in neighboring Afghanistan.
- ! **Thailand** up 300,000 tons to 7 million due to larger-than-anticipated forward sales and good harvest prospects.
- ! **Vietnam** down 300,000 tons to 4.0 million due to a tighter-than-expected stock situation and limited sales in deferred positions.

Selected Importers

- ! **Cote d'Ivoire imports** up 100,000 tons to 650,000 because of anticipated flat production and increasing consumption.
- ! **Nigeria** up 300,000 tons to 1.2 million due to relatively low import prices and increasing demand for parboiled rice.

-
- ! **Philippines** up 100,000 tons to 800,000 based on steady import pace, flat production prospects, and increasing consumption.
 - ! **Senegal** up 150,000 tons to 750,000 due to larger anticipated demand for relatively low priced broken rice.

2001 Trade Changes

Selected Exporters

- ! **India** exports up 600,000 tons to 1.6 million due to a surge in recent months of mostly parboiled rice to Nigeria and other African countries as a result of aggressive government sales to exporters.
- ! **Pakistan** down 100,000 tons to 1.9 million based on logistical constraints related to the unstable situation in neighboring Afghanistan.
- ! **Thailand** up 300,000 tons to 7 million due to strong export pace and slightly less competition from other major exporters.
- ! **Vietnam** down 200,000 tons to 3.6 million due to logistical problems related to recent flooding, lower than expected availability of high quality stocks, and higher internal prices which have hampered international competitiveness.

Selected Importers

- ! **Iran** imports down 200,000 tons to 800,000 based on slow import pace.
- ! **Nigeria** up 600,000 tons to 1.6 million due to unexpectedly large imports of parboiled rice to date.
- ! **Philippines** up 100,000 tons to 950,000 based on stronger than anticipated import pace.
- ! **Senegal** up 100,000 tons to 750,000 due to larger than expected imports of broken rice.

WORLD COARSE GRAINS SITUATION AND OUTLOOK

World coarse grain trade for 2001/02 is projected down 3 million tons from the previous year to 100.7 million. Global consumption is expected to continue to outpace production and carryout stocks are forecast to fall 23 million tons. US corn, China corn, and EU barley are forecast to comprise nearly two-thirds of world coarse grain stocks.

Global corn trade is projected to be down marginally from a year earlier at 74 million tons. US exports are projected to increase 3.5 million tons from the 2000/01 levels, mostly because of reduced competition. Smaller US carryout stocks will result from a smaller crop and larger exports. World barley trade has shifted from the EU and Canada to Australia, the FSU and Eastern Europe with abundant and favorably priced supplies.

2001/02 Trade Changes

Selected Exporters

- ◆ **Argentina corn** down 1 million tons to 10 million because of reduced plantings as a result of incessant rainfall.
- ◆ **Brazil corn** up 1 million tons to 2.3 million due to continued exports from the record 2000/01 crop.
- ◆ **Australia barley** up 600,000 tons to 4.5 million due to higher crop prospects.
- ◆ **EU barley** down 500,000 tons to 5 million because of the Commission's unwillingness to grant export subsidies in the face of high internal grain market prices.

Selected Importers

- ◆ **Egypt corn** up 400,000 tons to 5.5 million based on continuing strong food demand.
- ◆ **Taiwan corn** up 200,000 to 5 million due to high feed demand.
- ◆ **Iran barley** up 100,000 tons to 800,000 due to expected strong feed demand.

2000/01 Trade Changes

Selected Exporters

- ◆ **United States corn** up 500,000 tons to 48.5 million due to greater purchases by small importers.
- ◆ **Brazil corn** down 300,000 to 3.7 million tons as a result of slowing late-season shipment pace.
- ◆ **China corn** up 275,000 tons to almost 7.3 million due to large late season shipments to South Korea and Malaysia.
- ◆ **South Africa corn** down 500,000 tons to 1.1 million because of slower shipments.
- ◆ **Russia barley** up 100,000 tons to 900,000 due to strong late-season export pace.
- ◆ **Ukraine barley** up 200,000 tons to 1.2 million based on the strong pace of shipments late in the year.
- ◆ **Argentina sorghum** down 200,000 tons to 700,000 based on weak shipment pace.
- ◆ **Australia sorghum** up 100,000 to 900,000 tons due to a larger crop and higher than anticipated shipments to Japan.

Selected Importers

- ◆ **Canada corn** up 200,000 tons to 2.5 million because of strong livestock demand and sharply lower coarse grain production.
- ◆ **Mexico sorghum** up 250,000 tons to almost 5 million based on continued strong feed demand and limited corn import licenses granted to feed mills.

Notes:

Wheat trade year statistics are on July/June years. Barley, corn, sorghum, rye, and oats trade year statistics are on Oct/Sept years. Rice statistics are rough basis; trade year statistics are for subsequent calendar year. Rounding errors in conversion from international units causes some discrepancies with World Board Supply and Demand Estimates.

Notes:

Stocks, exports, and consumption are expressed on a milled basis in marketing years. Trade is on a milled basis in calendar years. "Stocks as a Percent of Consumption" represents the ratio of marketing year ending stocks to total consumption. Trade year statistics since 1979/80 exclude intra-EU trade.

REGIONAL TABLES

- 1) Includes Canada, Mexico, and the United States.
- 2) Includes Central America, the Caribbean, and South America.
- 3) Includes Azores, Cyprus, Iceland, Malta & Gozo, Norway, and Switzerland.
- 4) Includes Albania, Bulgaria, Czech Republic, Hungary, Poland, Romania, Slovakia, and former Yugoslavia.
- 5) Includes Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen.
- 6) Includes Algeria, Egypt, Libya, Morocco, and Tunisia.
- 7) Includes all other African countries except North Africa.
- 8) Includes Afghanistan, Bangladesh, Bhutan, India, Nepal, Pakistan, and Sri Lanka.
- 9) Includes all other Asian countries except South Asia.
- 10) Includes Australia, Fiji, New Zealand, and Papua New Guinea.

OTHER NOTES

Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Current and historical data on the European Union in this issue refers to the EU-15.

Consumption statistics reflect total utilization, including food, feed, seed, and differences in marketing year imports and marketing year exports.

This circular was prepared by the Grain and Feed Division, Commodity and Marketing Programs, Foreign Agricultural Service, USDA, Washington DC 20250. Information is gathered from official statistics of foreign governments and other foreign source materials, reports of U.S. agricultural attaches and Foreign Service officers, results of office research, and related information. Further information may be obtained by writing the division or telephoning (202) 720-6219.

Note: The previous report in this series was the Grain: World Markets and Trade Foreign Agricultural Service Circular FG 10-01 October 2001. For further details on world grain production see World Agricultural Production, Foreign Agricultural Service Circular WAP 11-01 November 2001.

This circular is available in its entirety on the World Wide Web via the Foreign Agricultural Service Home Page. The address is:
