# Oilseeds: World Markets and Trade

## World Oilseed Output and Trade Expected at Record Levels in 2001/2002

World oilseed production and export forecasts for 2001/2002 show increases of 2.9 percent and 1 percent respectively. Most of the production increase is due to a rise in soybean output, with cottonseed, rapeseed, palm kernel and peanuts also contributing. Minor declines are expected in the production of copra and sunflowerseed. The 2001/2002 projection for soybean production is 177MMT, about 3 percent higher than last year's record crop. Exports are expected to be nearly 5 percent above 2000/2001 levels at almost 55 MMT, as soybean exports more than offset expected declines in most other oilseeds. Exports of sunflowerseed and rapeseed are expected to be especially weak, declining 12 percent and 15 percent respectively. Ending stocks for all oilseeds should decline about 1 percent from recent high levels, as consumption increases more than supply.

## Situation and Outlook

---

USDA projects global oilseed trade to reach 68.9 million tons in marketing year 2001/02, a slight increase over 2000/01. The soybean sector leads this growth, with the European Union and China soybean imports both rising. Demand for soybeans in the EU is likely to stem from decreasing imports of rapeseed and sunflowerseed, as well as Germany's growing integration of biodiesel into its fuel supply. China's imports will once again rise based on the country's increasing crushing capacity and its need to meet the feed demand of the country's growing poultry industry. U.S. soybean exports in MY 2001/02 are projected to increase slightly as demand for soybean imports in many Asian countries, as well as in Mexico, is expected to grow. U.S. soybean supplies will reach a record high of 79.9 million tons, with production up 4.5 million tons over the previous year. South American soybean exports are projected to rise in 2001/02; however, South American supplies in 2001/02 may be lower than previously anticipated because what was thought to be a banner year for production now appears likely to yield only moderate gains in Brazil and a slight decrease in Argentina. In MY 2000/01, U.S. and Argentine soybean export estimates remained the same over the previous month, but Brazil's export estimate increased 700,000 tons, primarily due to increased exports to China.

USDA projects world rapeseed and sunflowerseed trade to decrease in 2001/02, as production in key exporting countries is likely to fall below 2000/2001 levels. Rapeseed exports will likely fall to 8.3 million tons, due entirely to a projected 1.1-million-ton decrease in Canadian rapeseed exports. The 2001/02 projection for world sunflowerseed trade of 2.9 million tons is 12 percent lower than that of 2000/01, due mainly to a 1.8-million-ton decrease in sunflowerseed production in Russia and the Ukraine. Export projections for these two countries combined are nearly 500,000 tons lower in 2001/02. Projections for both cottonseed and peanut production are higher in the out-year, but world trade in these products will likely remain steady in 2001/02 as these production gains are likely to be consumed domestically.

The projected increase in world protein meal trade to 56.5 million tons in 2001/02 is due to increased import demand for soybean meal in the EU and Eastern Europe. Fueling this demand is the ban on meat and bone meal in many countries in these regions. Soybean meal exports from the U.S. are projected to remain the same in 2001/02, but projections for Brazil, Argentina, and the EU, where many U.S. beans are crushed and re-exported, are all higher.

The world vegetable oil consumption projection for 2001/02 is a record 90.6 million tons, representing a three percent rate of growth. The largest increases in absolute terms are for soybean oil and palm oil, but the fastest growth projections are for cottonseed oil and peanut oil, growing at seven percent and nine percent respectively. Given the decreased availability of sunflowerseed oil, the Middle East and Northern Africa are likely to switch a significant portion of their imports away from sunflowerseed oil and towards the more readily-available soybean and palm oils. Globally, soybean oil exports from South America and, to a lesser extent, the U.S. will benefit from the reduced production of sunflowerseed oil in the Former Soviet Union and in Argentina.

and SEEDS DIVISION

Notes on World Supply/Demand Tables

- 1) Trade, crush, consumption, and stocks data are aggregated using individual marketing years with the exception of Argentina and Brazil. These two countries are converted to an October-September basis. Marketing years for countries in the Northern Hemisphere begin in the first year shown. Those in the Southern Hemisphere begin in the second year.
- 2) World imports and exports will not balance. This is due to differences in marketing years and time lags between exportation and importation.
- 3) Stocks data are not estimated for all countries.
- 4) Price averages are dollars per bushel for soybeans, dollars per short ton for soybean meal and cents per pound for soybean oil.

Regional area and county designations in the soybean, soybean meal, and soybean oil supply, distribution, and trade tables are as follows:

<b>Africa, North</b>	<b>Baltic States</b>	<b>FSU-12</b>	<b>Middle East</b>
Algeria	Estonia	Armenia	Cyprus
