

# Oilseeds: World Markets and Trade

## U.S. SOYBEAN EXPORTS TO CHINA IMPROVE

Note: Annual figures for 2002/03 are forecasts.

U.S. soybean sales to China for the period September through October 31, 2002 have reached 2.27 million tons, compared to only 1.5 million tons for the same period last year, setting a record for the first two months of the marketing year. China's domestic soybean price has been increasing despite a record-sized crop. As a result, the Chinese government appears to be less concerned about excessive supplies weighing on prices. The trade indicates that China has issued additional soybean import inspection permits that have allowed Chinese crushers to buy additional imported soybeans. In marketing year 2001/02, U.S. soybean exports to China fell from 5.7 million tons to 4.3 million tons because of the confusion surrounding China's biotech regulations. The extension of the interim period for the importation of biotech soybeans from December 20, 2002 to September 20, 2003 should limit similar confusion in the current marketing year and allow for imports to resume the higher pace. Consistent with the renewed strength of Chinese imports, U.S. shipments of soybeans to China should recover from the dip last marketing year. China accounts for over 20 percent of all U.S. soybean exports, representing approximately \$1 billion annually.

---

## Situation and Outlook

World oilseed production for 2002/03 is projected to total 321.7 million tons, an upward revision of 3.8 million tons from last month. Most of the increase is due to higher expected soybean production. Argentina, Brazil, the U.S., and China are up 1.5 million tons, 1 million tons, 980,000 tons, and 800,000 tons respectively. The increase in South American production is due to a rise in area harvested, as well as higher yields. Increased output in China is due to an upward revision in area, while better yields explain the U.S. increase. Severe drought prompted a 200,000 ton reduction in Australia's rapeseed production estimate to 800,000 tons. U.S. cottonseed and peanut production is also expected to decline 76,000 and 110,000 tons, respectively.

Worldwide exports of oilseeds were revised slightly higher this month, with soybeans rising nearly 480,000 tons, which more than offset the 183,000 ton drop in exports of rapeseed.

Global protein meal production was revised up this month by only 288,000 tons, with 265,000 tons of this increase going to exports. Production estimates for major vegetable oils also rose slightly this month to 91.8 million tons, with soybean oil production rising 215,000 tons, more than offsetting declines in sunflower seed oil of 37,000 tons and rapeseed oil of 125,000 tons.

World exports of edible oils rose 392,000 tons to 38 million tons, led by increases in palm oil, rapeseed oil, and soybean oil, up 200,000 tons, 140,000 tons, and 53,000 tons respectively.

The higher world oilseed production estimate this month will only partially be offset by greater utilization rates. As a result, ending stocks for soybeans are revised up 3.6 million tons, to 29.7 million tons. Most of this increase is expected in Argentine and Brazilian stocks, which are now expected to reach a combined 19.7 million tons, up 3.2 million from last month's estimates. The stock increase was mainly due to a downward revision of last year's exports from South America coupled with an increase in their estimated production. This, in combination with higher production expected in 2002/03 led to the growth in ending stocks. This increase in stocks helped to push the U.S. season average soybean price range down 10 cents to \$4.95 - \$5.85 per bushel.
