

Oilseeds: World Markets and Trade

Stocks Build as Soybean Supply Rises in 2004/05

Percent Change from 2003/04

Lower prices are expected to lead to a 6.6 percent increase in soybean meal consumption in 2004/05. Chinese and European demand for soybeans and meal is expected to rebound, with China importing 24 MMT of soybeans in 2004/05, while the EU switches progressively to soybean meal imports. Soybean meal consumption is expected to rise by almost ten percent in Brazil, the Middle East and North Africa. Even this growth will not be enough to absorb record soybean crops in both the U.S. and South America, resulting in ending stocks of 46.7 MMT. Global soybean production is expected to rise 19 percent from 2003/04's drought reduced level, and 14 percent from 2002/03. Record South American soybean production in the spring of 2005 should allow South American exporters to be more competitive with U.S. soybean exports in the fall of 2005. This is a reversal from what is expected in the fall of 2004, when a record U.S. soybean crop, coupled with the short South American crop this spring, will leave the U.S. with comparatively little competition. Prices for soybean meal in 2004/05 are likely to decline more than prices for soybean oil during 2004/05 partly because high meal content soybeans account for 84 percent of the increase in global oilseed production.

SUMMARY

The tight oilseed supply situation experienced in 2003/04 is expected to ease in 2004/05 as oilseed production recovers following the dry weather last season. Total oilseed production is forecast to rise 42.6 million tons to 378.3 million tons in 2004/05, an increase of nearly 13 percent over current year production. Production increases are expected for most oilseeds with soybeans accounting for 84 percent of the increase or 35.8 million tons over 2003/04. Only sunflowerseed production is expected to decline in 2004/05 compared to the previous year. Dramatic increases in Russian and Ukrainian sunflowerseed production that occurred in 2003 will likely be scaled back in 2004, but should remain strong relative to production levels recorded in the early 2000's.

World soybean production is expected to reach 225.0 million tons in 2004/05, up 19 percent from the previous year. Recent high prices for soybeans coupled with an expected return to normal yields are helping drive the increase in world production. Brazil's production is forecast to rise 25 percent to 66.0 million tons as acreage continues to expand and yields return to normal levels. Argentine soybean production is forecast to rise 15 percent to 39 million tons while soybean production in the U.S. will grow to a record 80.7 million tons, up 23 percent from 2003. China's soybean production is forecast to rise 1.5 million tons to 17.5 million tons in 2004/05, helping satisfy China's growing demand for soybeans.

Other significant increases in oilseed production include a 15-percent rise in EU rapeseed production, spurred by higher prices, a return to more normal yields, and increased demand for bio-diesel. China's peanut production, after declining in 2003/04 due to poor growing conditions, is expected to rise 2.4 million tons to 15.8 million tons. Cottonseed production in China is also expected to grow 31 percent to 11.4 million tons. Expanded cotton planting due to demands for cotton fiber in China and elsewhere is driving the increase for 2004.

Growing oilseed production will help push oilseed exports up 7.2 million tons in 2004/05. Prices are expected to fall below peak levels experienced in 2003/04. However, prices and grower returns should remain healthy as import demand remains strong. China's oilseed imports for 2004/05 are forecast to increase 27 percent (5.3 million tons) to 25.0 million tons. This is in addition to a 7.1-million-ton increase in domestic oilseed production and is indicative of China's growing demand for oilseeds. Soybeans account for much of the increase in imports both for Chinese and for world trade in total. Other major soybean import markets showing trade increases in 2004/05 include Indonesia and Mexico.

World rapeseed trade is also expected to increase in 2004/05 due primarily to an increase in EU production. China is forecast to be the main growth market for imports in 2004/05. Peanut trade is forecast to increase only marginally in 2004/05 despite the rise in China's production. Prices are expected to soften somewhat as supplies increase, though demand for snack nuts is expected to remain somewhat static in 2004/05.

World production of protein meals is forecast to grow 7 percent to 207.6 million tons in 2004/05. Much of the increase in world protein meal production is expected to center on soybean meal with the U.S., Brazil, and Argentina accounting for most of the increase. Production of soybean meal in the EU is also expected to grow in 2004/05 compared to the current year. However, EU soybean crush is expected to decline below recent historic levels as EU crush margins remain less competitive than elsewhere and demand for soybean oil within the EU remains slow.

World protein meal exports are forecast to increase 2.0 million tons in 2004/05 due mostly to an increase in soybean meal trade. Much of this increase will come from Brazil where soybean meal exports are forecast to climb 1.7 million tons to 18.1 million tons. This increase continues the trend that has seen Brazil's exports of soybean meal increase 70 percent since 2000/01. U.S. soybean meal exports are also forecast to rise 1.2 million tons in 2004/05 to 5.0 million tons. However, this is still below the level exported earlier in the decade. Argentina's soybean meal exports will likely increase in the coming year, but at a considerably slower pace than in the U.S. and Brazil. However, unlike the U.S., Argentina's exports of soybean meal are significantly above 2000/01 levels. The EU will likely show the greatest increase in soybean meal imports in 2004/05 with much of this increase expected to originate from Brazil. Thailand's imports of soybean meal is also expected to be higher in 2004/05 as demands for poultry feeding improve following last year's avian flu outbreak and subsequent rebuilding of poultry stocks.

World vegetable oil production is forecast to increase 4.2 million tons to 105.5 million tons. Increases in cottonseed and peanut oil are forecast mainly due to larger seed crops in China. Palm oil production is also expected to increase in the coming year, spurred on by continued strong price levels for palm oil. However, soybean oil production, forecast to rise 2.4 million tons to 33.4 million tons, is still expected to account for over half of the increase in world vegetable oil supplies. World trade of vegetable oils is forecast to increase in 2004/05 in response to this growth in oil supplies and somewhat lower prices. However, much of the increase in trade will center on soybean oil, followed by lesser increases in palm and coconut oil.

China, India, and Bangladesh are expected to show the largest increases in soybean oil imports in 2004/05, much of it sourced from South America. U.S. soybean oil exports are forecast to grow in 2004/05 to 522,000 tons. However, this is roughly half the level reached in 2001/02 and 2002/03. Growth in palm oil exports is expected from both Indonesia and Malaysia. While import levels are forecast to remain stable or grow in most markets, imports by the EU and China are expected to show the strongest growth in 2004/05.

Notes on World Supply/Demand Tables

- 1) Trade, crush, consumption, and stocks data are aggregated using individual marketing years with the exception of Argentina and Brazil. These two countries are converted to an October-September basis. Marketing years for countries in the Northern Hemisphere begin in the first year shown. Those in the Southern Hemisphere begin in the second year.
- 2) World imports and exports will not balance. This is due to differences in marketing years and time lags between exportation and importation.
- 3) Stocks data are not estimated for all countries.
- 4) Price averages are dollars per bushel for soybeans, dollars per short ton for soybean meal and cents per pound for soybean oil.

Regional area and county designations in the soybean, soybean meal, and soybean oil supply, distribution, and trade tables are as follows:

Asia	Africa, North	FSU-12	Latin America	Europe (EU)*
Bangladesh	Algeria	Armenia	Argentina	Austria
Burma	Egypt	Azerbaijan	Barbados	Belgium
China	Libya	Byelarus	Bolivia	Cyprus
Cambodia	Morocco	Georgia	Brazil	Czech Republic
