Approved by the World Agricultural Outlook Board

August 12, 2010

WHEAT: U.S. wheat ending stocks for 2010/11 are lowered this month as higher expected exports more than offset an increase in forecast production and lower projected feed and residual use. Production is forecast 49 million bushels higher mostly reflecting higher yields for durum and other spring wheat, especially in the Northern Plains. Winter wheat production is also raised slightly as higher yields in the Northern Plains and Pacific Northwest more than offset reductions in the eastern Corn Belt. Feed and residual use is lowered 10 million bushels as rising values have priced wheat out of feed rations. Exports are projected 200 million bushels higher with declines in foreign production, particularly in the FSU-12, reducing global supplies and making U.S. wheat competitive in key Middle East and North Africa markets. U.S. ending stocks are projected 141 million bushels lower from last month, and down 21 million from 2009/10. The 2010/11 season-average farm price is projected at \$4.70 to \$5.50 per bushel, up 50 cents on both ends of the range.

Several changes are made to U.S. supply and use estimates for 2009/10 based on the latest U.S. Bureau of Census trade and mill grind data and revisions. Exports are raised 16 million bushels and imports are raised 4 million bushels. Food use is lowered 3 million bushels. Thus, feed and residual is estimated 10 million bushels lower.

Global wheat supplies for 2010/11 are reduced sharply with world production lowered 15.3 million tons, mostly on reductions for FSU-12 and EU-27 countries. Production for Russia is lowered 8.0 million tons as continued extreme drought and record heat during July and early August have further reduced summer crop prospects. Kazakhstan production is lowered 2.5 million tons reflecting the same adverse weather conditions as in Russia. Ukraine production is lowered 3.0 million tons as heavy summer rains damaged maturing crops and hampered harvesting in western and southern growing areas. Harvest results also support indications that producers reduced input use in response to limits on available capital. EU-27 production is lowered 4.3 million tons with yields reduced for northwestern Europe on untimely heat and dryness. Yields are lowered for southeastern Europe as heavy rains from the same weather pattern that affected Ukraine reduced output. Production is also lowered for Algeria, Brazil, Uruguay, Belarus, and Croatia. Partially offsetting are increases for India, the United States, Australia, and Uzbekistan.

World wheat imports and exports are reduced sharply as tighter supplies and higher prices reduce projected global consumption. Imports are projected 5.7 million tons lower as higher prices reduce demand in a number of countries. Exports are lowered 12.0 million tons for Russia partly reflecting the recent announcement banning exports through December. Also limiting Russia export prospects is higher expected wheat feeding with drought-reduced forage and coarse grain crops and policy goals aimed at increasing domestic meat production. Exports for Kazakhstan and Ukraine are lowered 2.0 million tons each with sharply lower production. Higher exports from other countries partly offset FSU-12 declines. Exports are raised 1.2 million tons for China, 1.0 million tons each for Australia and EU-27, and 0.9 million tons for Turkey. The 5.4-million-ton increase projected for U.S. exports is expected to offset the largest share of the decline from FSU-12.

Global ending stocks are projected 12.3 million tons lower. At 174.8 million tons, world stocks are projected 49.9 million tons higher than in 2007/08 when prices soared to record levels.

COARSE GRAINS: Projected U.S. feed grain supplies for 2010/11 are raised this month as higher forecast production for corn and sorghum more than offset lower corn carryin. Beginning stocks for corn are projected 52 million bushels lower reflecting higher expected exports, corn use for sweeteners and starch, and a small reduction in projected imports for 2009/10. Corn production for 2010/11 is forecast 120 million bushels higher. The survey-based yield forecast of 165.0 bushels per acre is up 1.5 bushels from last month's projection and 0.3 bushels above last year's record.

Domestic corn use for 2010/11 is raised 30 million bushels reflecting higher expected corn use for sweeteners and starch. Exports are projected 100 million bushels higher as tighter foreign supplies of wheat and coarse grains raise prospects for U.S. corn shipments. Despite higher production, ending stocks are projected down 61 million bushels at 1.3 billion, the lowest in 4 years. The season-average farm price is raised 5 cents on each end of the range to \$3.50 to \$4.10 per bushel. Similar price increases are projected for the other feed grains.

Other 2010/11 feed grains changes include higher sorghum and barley production with higher forecast yields. Sorghum feed and residual use is projected 15 million bushels higher with larger supplies. Sorghum exports are raised 10 million bushels with higher expected demand from Mexico.

Global coarse grain supplies for 2010/11 are projected 10.6 million tons lower with reduced foreign production more than offsetting higher U.S. output. More than half of the reduction in foreign coarse grain production is for barley. Barley production is lowered 3.0 million tons for Russia as extended drought and extreme heat sharply reduce yield potential for spring barley. EU-27 barley production is lowered 1.5 million tons on untimely dryness and heat in northwest Europe and excessive rains in eastern Europe. Barley production is lowered 1.5 million tons for Ukraine, 0.6 million tons for Algeria, and 0.5 million tons for Kazakhstan. Global corn production is lowered 0.8 million tons with Russia and Ukraine each lowered 1.5 million tons and EU-27 lowered 1.0 million tons. These reductions more than offset higher production in the United States. Global rye and oats production are lowered 1.3 million tons and 0.7 million tons, respectively, on reductions for Russia, EU-27, and Ukraine.

Global coarse grain imports are raised this month with increases for corn in China, EU-27, South Korea, and Israel, supporting higher expected corn feeding in each country. In EU-27, South Korea, and Israel, corn is expected to replace higher priced wheat in feed rations. Barley feeding is also raised for EU-27 replacing wheat. By contrast, coarse grain feeding is lowered 3.7 million tons for Russia with wheat expected to partly replace barley, corn, oats, and rye in livestock and poultry feeding. Offsetting reduced coarse grain exports from Ukraine and Russia are higher barley exports from EU-27 and Australia and higher corn exports from the United States. Global coarse grain ending stocks are lowered 8.1 million tons with corn ending stocks down 1.9 million. EU-27 barley ending stocks are down 4.0 million tons accounting for most of the rest. Coarse grain and corn ending stocks are both expected to remain well above their recent lows in 2006/07.

RICE: U.S. total rice supplies for 2010/11 are projected at a record 299.8 million cwt, down 9.6 million from last month, but up 29.9 million from the previous year. Beginning stocks, imports, and production are lowered from a month ago. U.S. beginning stocks for 2010/11 are lowered 4.5 million cwt to 33.9 million because of changes made to the 2009/10 supply and use balance. USDA's first survey-based forecast of the 2010/11 U.S. rice crop is a record 245.9 million cwt, down 4.1 million from last month's projection, but up 26.0 million from 2009/10. Average yield is

forecast at 7,039 pounds per acre, down 118 pounds per acre from last month's trend-based projection, and a decrease of 46 pounds per acre from last year. Area harvested at 3.5 million acres is unchanged from a month ago. Long-grain production is forecast at a record 187.2 million cwt, down 2.8 million from last month, while combined medium- and short-grain production is forecast at 58.6 million, down 1.4 million from a month ago. The import projection is lowered 1.0 million cwt to 20.0 million based mostly on the revised estimate for 2009/10, indicating slower growth.

U.S. total rice use for 2010/11 is projected at a record 243.0 million cwt, up 1.0 million cwt from last month, and an increase of 7.0 million from 2009/10. Domestic and residual use is unchanged from last month. The export projection is raised 1.0 million cwt from last month to 114.0 million based mostly on large food aid announcements for shipment early in the marketing year. The makeup of the export projection is changed from last month, as the combined milled- and brown-rice export projection is raised 5.0 million cwt, and the rough rice export projection is lowered 4.0 million cwt. The long-grain export projection is raised 1.0 million cwt to 80.0 million, and the combined medium- and short-grain estimate is unchanged from a month ago. U.S. rice ending stocks for 2010/11 are estimated at 56.8 million cwt, down 10.6 million from last month, but up 22.9 million from the previous year, and the highest stocks since 1985/86. The all rice and by-class prices for 2010/11 are unchanged from a month ago.

The U.S. 2009/10 export estimate is raised 4.0 million cwt to 109.0 million based on U.S. Census data through June and *U.S. Export Sales* data through July 29. Long-grain exports are raised 2.5 million cwt to 74.5 million, and combined medium- and short-grain exports are raised 1.5 million to a record 34.5 million. Additionally, the 2009/10 import estimate is lowered 0.5 million cwt to 19.5 million, based on Census data through June. The changes in 2009/10 trade led to a corresponding reduction in 2009/10 ending stocks.

Projected global 2010/11 total supplies are raised from a month ago primarily due to an increase in beginning stocks, while production and imports are nearly the same as last month. The increase in beginning stocks of 5.5 million tons is due primarily to an increase in India's 2009/10 rice crop combined with a reduction in estimated domestic and residual use—both estimates are based on a recently received report from the Agricultural Counselor's office in New Delhi. India's 2009/10 rice crop is estimated at 89.1 million tons, up 1.6 million from last month, and domestic consumption and residual is estimated at 85.4 million, down 3.9 million from the July estimate. Global rice production for 2010/11 is projected at a record 459.2 million tons, nearly the same as a month ago. Global consumption is raised from a month ago largely due to an increase for India. World ending stocks for 2010/11 are projected at 97.5 million tons, up 0.9 million from last month, largely the result of upward revisions for Bangladesh, Burma, India, and Turkey.

OILSEEDS: U.S. oilseed production for 2010/11 is projected at 103.3 million tons, up 2.6 million from last month as higher soybean and cottonseed production are only partly offset by lower peanut production. Soybean yields are forecast at 44.0 bushels per acre, 1.1 bushels above last month's trend yield projection, and equal to last year's record yield. The first survey-based forecast of U.S. soybean production is a record 3.4 billion bushels, 88 million above the July projection, and 74 million above last year's crop. Projected soybean exports are raised 65 million bushels to 1.435 billion. The sharp increase in exports reflects strong export sales, especially to China, stronger projected import demand for China, and reduced soybean stocks in South America at the beginning of the 2010/11 marketing year. China soybean imports are raised to 49.5 and 52 million tons, respectively for 2009/10 and 2010/11. Soybean crush is raised 5 million bushels to 1.65 billion reflecting a small increase in domestic soybean meal demand. Soybean ending stocks are projected at 360 million bushels, unchanged from July.

Soybean and product prices all increased this month. The U.S. season-average soybean price for 2010/11 is projected at \$8.50 to \$10.00, up 40 cents on both ends of the range. Soybean meal prices are projected at \$250 to \$290 per short ton, up \$10.00 on both ends of the range. Soybean oil prices are projected at 36.5 to 40.5 cents per pound, up 2.5 cents on both ends of the range.

Global oilseed production for 2010/11 is projected at 439.7 million tons, down 1 million from last month. Reductions for sunflowerseed and rapeseed are mostly offset by higher soybean production. Sunflowerseed production is reduced by 1 million tons each for Russia and Ukraine. Persistent drought and excessive heat in July and early August sharply reduced yield potential for both countries. Rapeseed production is reduced for EU-27, Russia, Ukraine, and Belarus. Higher global soybean production reflects the larger U.S. crop. Other changes include higher rapeseed production for Australia, lower sunflowerseed production in EU-27, lower cottonseed production for Pakistan, and increased cottonseed production for India.

U.S. changes for 2009/10 include increased soybean crush and exports and lower ending stocks. Crush is raised 5 million bushels to 1.75 billion reflecting increased domestic soybean meal disappearance. Soybean exports are increased 10 million to a record 1.47 billion bushels. Soybean ending stocks are projected at 160 million bushels, down 15 million from last month. Soybean oil ending stocks are raised to 3.18 billion pounds reflecting sharply lower projected use for methyl ester production.

SUGAR: Projected U.S. sugar supply for fiscal year 2010/11 is increased 506,000 short tons, raw value, from last month, due to higher beginning stocks, production, and imports. Production is increased 100,000 tons due to higher than expected forecast U.S. sugarbeet yields. Imports are increased 185,000 tons to reflect lower tariff rate quota (TRQ) shortfall and the announced refined specialty sugar quota. Sugar use is increased 200,000 tons in line with the increase for 2009/10.

For 2009/10, U.S. supplies are increased 341,000 tons, due to higher beginning stocks, production, and imports. Beginning stocks are increased 35,000 tons due to revisions in *Sweetener Market Data*. Cane sugar production is increased 6,000 tons based on processor reports. Imports are increased 300,000 tons: 50,000 tons less TRQ shortfall, 50,000 tons more re-export imports, and 200,000 tons from Mexico and high-tier imports. These import increases are driven by tight U.S. supplies. Total use is increased 120,000 tons, reflecting revised estimates in *Sweetener Market Data*. Ending stocks are increased 221,000 tons.

For Mexico, 2010/11 ending stocks are lowered 95,000 metric tons, raw value, due to lower beginning stocks. Mexico's 2009/10 production is decreased slightly while exports are increased 90,000 tons; sugar use is unchanged.

LIVESTOCK, POULTRY, AND DAIRY: Total U.S. meat production forecasts for 2010 and 2011 are reduced slightly from last month. Beef production for 2010 is reduced on slightly lower estimated second quarter output and forecast lighter average carcass weights in the third quarter that more than offset slightly higher slaughter. For 2011, beef production is unchanged but is shifted between quarters as more cattle are expected to be marketed in the first part of the year. Pork production in late 2010 and 2011 is reduced on lower expected imports of live swine from Canada. Broiler meat and turkey production for 2010 reflects slightly higher estimated second quarter production. Forecast poultry meat production for the remainder of 2010 and 2011 is unchanged. Cattle, hog, and poultry prices are little changed from last month.

Beef imports are raised for 2010 based on the current pace of imports and weakening domestic cow slaughter. Export forecasts for beef, pork, and broilers are raised, partly reflecting strong

recent shipments. Stronger demand from a number of markets is expected to support higher exports through the remainder of this year and into next year.

Forecast milk production for 2010 and 2011 is raised from last month. Producers continue to add cows to the herd and the rate of growth in milk per cow has increased. Exports for 2010 and 2011 are raised sharply as June exports were strong, global supplies remain relatively tight, and demand in a number of markets is expected to support higher than previously forecast sales. However, sales in 2011 will be dampened by increased competition.

Strong demand for butter and cheese resulted in higher forecast prices for 2010 but the prices for nonfat dry milk (NDM) and whey are lowered from last month. The Class III price forecast for 2010 is raised as the higher cheese price more than offsets the lower whey price, but the Class IV price forecast is reduced as the lower NDM price more than offsets the higher butter price. For 2011, cheese, NDM, and whey price forecasts are reduced but butter is raised. For 2011, the Class III and Class IV price forecasts are lowered. The all milk price is forecast to average \$15.90 to \$16.10 per cwt for 2010 and \$15.55 to \$16.55 per cwt for 2011.

COTTON: The 2010/11 U.S. cotton forecast shows higher production and exports compared with last month, resulting in lower ending stocks. Production is raised 234,000 bales, as the first survey-based forecast indicates lower abandonment, more than offsetting a reduction in yield. Exports are raised 700,000 bales to 15.0 million based on larger supplies and higher foreign import demand. The projected range for the marketing-year average price received by producers is raised 1 cent on each end of the range to 61 to 75 cents per pound.

With largely offsetting increases in world production and consumption, a reduction in world 2010/11 beginning stocks is reflected in ending stocks. World beginning stocks are lowered 3.4 million bales from last month, including reductions for China, India, Pakistan, Brazil, and Australia, partially offset by an increase for the United States. Production is raised for India, the United States, Turkey, and Australia, but is reduced 7 percent for Pakistan due to estimated losses from floods. World consumption is raised to nearly 121 million bales, 2.7 percent above last season, with increases from last month mainly in China and Turkey. With lower beginning stocks and higher consumption, this month's China imports are raised 850,000 bales, accounting for about three-fourths of the 1.2 million-bale increase in world imports. Exports are higher mainly in India and the United States. World ending stocks are now projected at 45.6 million bales. If realized, the stocks-to-use ratio of 38 percent would be the smallest since 1994/95.

This month's estimates include historical adjustments in supply and use for India and Pakistan. China's 2009/10 consumption is raised 1.0 million bales based on recent indications of higher offtake.

Approved by the Secretary of Agriculture and the Chairperson of the World Agricultural Outlook Board, Gerald A. Bange, (202) 720-6030. This report was prepared by the Interagency Commodity Estimates Committees.

| ===== | | | | | | |

Note: Totals may not add due to rounding. 1/ Marketing year beginning September 1 for sorghum, June 1 for barley and oats. 2/ Marketing-year weighted average price received by farmers. * For July: Sorghum area planted and area harvested as reported in the June 30, 2010, "Acreage" report. Sorghum projected yield derived from the 2000-2009 average yield, excluding 2002 and 2003, adjusted to reflect adequate to abundant soil moisture in the southern and central Plains. Barley and oats area planted, area harvested, yield, and production as reported in the July 9, 2010, "Crop Production" report.

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1.

2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 2008/09-1.4; 2009/10-2.4; 2010/11-2.4. 3/ Residual includes unreported use, processing losses, and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Includes rough rice and milled rice exports. Milled rice exports are converted to an equivalent rough basis. 5/ Expressed as a percent-- the national average milling yield calculated by the Farm Service Agency (FSA) from warehouse stored loan data. The 2010/11 milling yield is calculated using the previous five-year average. 6/ Includes imports. 7/ Marketing-year weighted average price received by farmers. 8/ Exports by type of rice are estimated. * For July: Area planted and area harvested as reported in June 30, 2010, "Acreage" report. Projected yield is derived from the trend yields by rice class for the period, 1990-2009.

1/ Data based on local marketing years except Argentina and Brazil which are adjusted to an October-September year. 2/ World imports and exports may not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use. 3/ Argentina, Brazil and Paraguay. 4/ Japan, China, and EU, Mexico, and Southeast Asia (includes Indonesia, Malaysia, Philippines, and Thailand).

1/ Simple average of monthly prices calculated by AMS from NASS weekly average dairy product prices for class price computations. 2/ Annual Class III and Class IV prices are the simple averages of monthly minimum Federal order milk prices paid by regulated plants for milk used in the respective classes. All milk price is the simple average of monthly prices received by farmers for milk at average test. 3/ Does not reflect any deductions from producers as authorized by legislation.

Note: Tables on pages 35-37 present a 29-year record of the differences between the August projection and the final estimate. Using world wheat production as an example, changes between the August projection and the final estimate have averaged 11.2 million tons (2.0%) ranging from -32.1 to 19.5 million tons. The August projection has been below the estimate 18 times and above 11 times.

1/ See pages 35 and 36 for record of reliability for U.S. wheat, rice, soybeans, and cotton. 2/ Final estimate for 1981/82-2008/09 is defined as the first November estimate following the marketing year, and for 2009/10 last month's estimate. 3/ Calendar years 1983 thru 2009 for meats, eggs, and milk. Final for animal products is defined as latest annual production estimate published by NASS.

Related USDA Reports

The *WASDE* report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the *WASDE* report provides a framework for more detailed reports issued by USDA's Economic Research Service and Foreign Agricultural Service. For more information on how the *WASDE* report is prepared, go to: <http://www.usda.gov/oce/commodity/wasde>.

Supply and Demand Database

The Foreign Agricultural Service publishes Production, Supply, and Demand Online, a comprehensive database of supply and demand balances by commodity for 190 countries and regions at <http://www.fas.usda.gov/psd/online>. Data for grains, oilseeds, and cotton are updated monthly and data for other commodities are updated less frequently.

Foreign Production Assessments

Preliminary foreign production assessments and satellite imagery analysis used to prepare the *WASDE* report are provided by the Production Estimates and Crop Assessment Division (PECAD) of the Foreign Agricultural Service. PECAD is located at www.pecad.fas.usda.gov/.

Metric Conversion Factors

1 Hectare = 2.4710 Acres

1 Kilogram = 2.20462 Pounds

| Metric-Ton Equivalent | = Domestic Unit | Factor |
|------------------------------|------------------------|---------------|
