January 12, 2017

WHEAT: U.S. 2016/17 all wheat ending stocks are raised this month and projected to reach the highest level since the late 1980's. Feed and residual use is lowered 35 million bushels reflecting disappearance for June-November as implied by the December 1 stocks estimated in the *Grain Stocks* report. Seed use is lowered 8 million bushels on the winter wheat planted area released today in the *Winter Wheat and Canola Seedings* report. Total supplies for 2016/17 are lowered fractionally on lower beginning stocks while 2016 production is unchanged. Projected ending stocks for 2016/17 are raised 43 million bushels. The season-average farm price is raised \$0.10 at the midpoint to \$3.80 on higher-than-expected cash prices to date. However, this season-average price would still be the lowest since 2005.

Global wheat supplies for 2016/17 are raised 1.3 million tons on a production increase that is only partially offset by lower beginning stocks. The largest increases are for Argentina, Russia, and the EU. Global exports are raised 1.2 million tons led by increases for Argentina, Australia, and the EU. Partly offsetting is a reduction in Canadian exports reflecting the slow shipment pace so far this year. Global use for 2016/17 is raised 0.1 million tons with increased food use partially offset by a reduction in feed and residual use. With total global supplies increasing faster than use, ending stocks are increased 1.2 million tons to a new record of 253.3 million.

COARSE GRAINS: This month's 2016/17 U.S. corn outlook is for lower production, reduced feed and residual use, increased corn used to produce ethanol, and smaller stocks. Corn production is estimated at 15.148 billion bushels, down 78 million from last month on lower harvested area and a reduction in yield to 174.6 bushels per acre. Imports are raised based on the pace of corn imports through November. Feed and residual use is lowered 50 million bushels to 5,600 million based on the smaller crop, increased corn used to produce ethanol, greater sorghum feeding, and indicated disappearance during September-November as reflected by the December 1 stocks. Corn used to produce ethanol is raised 25 million bushels to 5,325 million based on the most recent data from the *Grain Crushings and Co-Products Production* report which estimated the amount of corn used to produce ethanol during September-November to be record high. With supply falling faster than use, corn ending stocks are lowered 48 million bushels from last month. The projected range for the season-average corn price received by producers is raised 5 cents on both ends to \$3.10 to \$3.70 per bushel.

Sorghum production for 2016/17 is estimated 18 million bushels higher on increases in both harvested area and yield. Grain sorghum prices are projected to average \$2.65 to \$3.15 per

bushel, down 15 cents at the midpoint reflecting the weakening relationship to corn prices in interior markets.

Global coarse grain production for 2016/17 is forecast 1.7 million tons lower to 1,327.7 million. This month's 2016/17 foreign coarse grain outlook is for marginally lower production, higher consumption, and increased trade relative to last month. Serbia corn production is raised reflecting the latest information from the Foreign Agricultural Service office in Belgrade. Partly offsetting is lower corn production for Bolivia where the impact of a severe drought during the growing season was worse than previously expected. Russia barley production is lowered based on the latest government statistics. Argentina barley production is lowered on dryness in southern Buenos Aires province during crop heading and grain fill in November and December.

Major global trade changes for 2016/17 this month include lower projected corn exports for India, more than offset by increases for Serbia and the EU. Imports are raised for Bolivia, but lowered for Indonesia. Foreign corn ending stocks are virtually unchanged from last month, with reductions for Indonesia, Mexico, and the EU offset by an increase for Canada.

RICE: The U.S. 2016/17 all rice crop is reduced 10.6 million cwt to 224.1 million on lower area and yield. The all rice average yield is lowered 256 pounds per acre to 7,237 pounds. Arkansas, California, and Texas accounted for the bulk of the production decline. The long-grain crop is reduced 9.6 million cwt to 166.5 million but remains the largest since the 2010/11 record. Medium- and short-grain production is lowered 1.0 million cwt to 57.7 million. All rice domestic and residual use is lowered 1.0 million cwt to 132.0 million, based on the smaller crop. Total exports are unchanged, but rough exports are raised 1.0 million cwt, which is offset by a 1.0-million-cwt reduction in milled exports. In addition, long-grain exports are lowered 1.0 million cwt, offsetting an increase by the same amount for medium- and short-grain exports. The projected all rice season-average farm price is unchanged at a range of \$9.90 to \$10.90 per cwt.

Global rice supplies for 2016/17 are lowered 1.5 million tons led by a 0.7 million-ton-reduction for Sri Lanka production. Global exports and domestic consumption are both raised fractionally. Ending stocks are lowered 1.5 million tons to 118.7 million.

OILSEEDS: U.S. oilseed production for 2016/17 is estimated at 127.3 million tons, down 1.5 million from last month. Lower soybean and peanut production is partly offset with higher canola, sunflowerseed, and cottonseed crops. Soybean production is estimated at a record 4,307 million bushels, down 54 million from last month on lower yields. Harvested area is estimated at 82.7 million acres, down 0.3 million from the previous forecast with lower planted area. Yield is estimated at a record 52.1 bushels per acre, down 0.4 bushels. Soybean supplies are down 60 million bushels on lower production and imports. With exports and crush unchanged, ending stocks are projected at 420 million bushels, down 60 million from last month. Although soybean crush is unchanged, soybean meal production is reduced on a lower extraction rate. Soybean meal exports are also reduced on lagging sales. Soybean oil balance sheet changes include increased production on a higher extraction rate, and increased ending stocks.

U.S. peanut production is reduced 9 percent from the previous forecast based on lower harvested area, mainly in Texas, and lower yields in most states. With reduced supplies, peanut exports, crush, and ending stocks are reduced.

The 2016/17 U.S. season-average farm price forecast for soybeans is projected at \$9.00 to \$10.00 per bushel, from \$8.70 to \$10.20, up 5 cents at the midpoint. The soybean meal price forecast is unchanged at \$305 to \$345 per short ton. The soybean oil price forecast of 34 to 37 cents per pound is lowered 0.5 cents at the midpoint.

The 2016/17 global oilseeds supply and demand estimates include higher production and exports compared to last month. Oilseed production is projected up 0.1 million tons to 554.8 million on increases for cottonseed, rapeseed, and sunflowerseed partly offset by reductions for soybeans and peanuts. Soybean production is lowered 0.2 million tons as increases for Brazil and China are offset by declines in Bolivia, Uruguay, and the United States. The largest change to production is a 2.0-million-ton increase to 104.0 million for Brazil, where beneficial rain has resulted in improved yield prospects.

Global oilseed trade is projected at 160.3 million tons, up 0.4 million from last month. Increased soybean exports for Brazil more than offset lower soybean exports for Bolivia and Uruguay and lower rapeseed exports for Canada. Global oilseed crush is projected higher on increased soybean crush for Argentina and India and increased rapeseed crush for Canada. Global oilseed stocks are projected at 93.7 million tons, down 0.9 million, mainly on lower soybean stocks for the United States.

SUGAR: U.S. cane sugar production for 2016/17 is reduced by 29,236 short tons, raw value (STRV) based on industry reporting in Louisiana and Texas. Total imports are reduced by 1,515 STRV based on end of calendar year adjustments made for tariff rate quota imports under several Free Trade Agreements. Ending stocks for 2016/17 are projected at 1.881 million STRV, implying an ending stocks-to-use ratio of 15.4 percent.

Mexico sugar imports for 2015/16 are increased by 12,968 metric tons (MT) to 82,876 based on government data for the complete marketing year. Total use is increased by the same 12,968 MT for deliveries for other uses. Imports for 2016/17 are increased by 50,000 MT. These are imports projected to enter from countries other than the United States and expected to be used for other deliveries. The ending stock total for 2016/17 is unchanged at 1.229 million MT. This is the amount projected to meet sugar supply requirements of domestic deliveries for human consumption and IMMEX deliveries for 2.5 months of the following marketing year and exports to the U.S. market for the first three months of that same year. Total exports for 2016/17 are unchanged at 1.470 million MT with the same 832,081 MT projected for the U.S. market as last month.

LIVESTOCK, POULTRY, AND DAIRY: The estimate for total red meat and poultry production for 2016 is raised slightly from last month. Beef production is raised on increased fed cattle slaughter and heavier carcass weights. Pork production for 2016 is raised based on slaughter data. Broiler and turkey production for 2016 is slightly lower based on the recent

slaughter. For 2017, red meat and poultry production is raised largely on higher forecast pork production, although forecasts of beef and broilers are raised. Higher expected cattle placements in late 2016 and early 2017 underpin higher forecast beef production in 2017. USDA will release its semi-annual *Cattle* report January 31 which will provide estimates of heifers held for breeding along with indications of the availability of cattle for placement during 2017. Pork production for 2017 is raised based on estimates from the December *Quarterly Hogs and Pigs* report. The 5 percent year-over-year increase in the September–November pig crop will be slaughtered largely in the second quarter of 2017. Producers indicated intentions to farrow 1 percent more sows in the first half of 2017 which, coupled with expected growth in pigs per litter, will support a higher level of slaughter during the second half of the year. Broiler production is raised for early 2017 on recent hatchery data, but the turkey production forecast is unchanged. Egg production for 2017 is raised slightly based on hatchery data.

Both beef and pork 2016 export estimates are raised based on November trade data and expectations of strong export demand in December. Beef imports are lowered, but no change is made to pork imports. Broiler and turkey exports are lowered on recent trade data. No change is made to the 2016 egg export estimate. For 2017, beef exports are raised as current demand strength is expected to carry into 2017. Imports are forecast higher on expectations of slightly larger supplies from Oceania in early 2017. No changes are made to pork, broiler, or turkey trade forecasts. The 2017 egg export forecast is raised on expectations of stronger sales in the first half of the year.

Livestock and poultry prices for 2016 are adjusted to reflect December price data. The 2017 cattle price forecast is increased on continued strong demand into the first part of 2017. The hog price forecast for first quarter 2017 is raised on demand strength, but price forecasts for subsequent quarters are lowered as hog supplies are expected to be large. Broiler prices are raised slightly on early-year demand strength. Turkey prices are forecast lower on relatively soft demand. Egg prices are increased.

Milk production for 2016 is raised on slightly larger milk cow numbers. The 2017 milk production forecast is raised from last month as improved returns support increases in both cow numbers and milk per cow. Fat and skim-solids basis exports for 2016 are raised on recent trade data. Imports are unchanged. Exports on a fat basis are reduced slightly for 2017, but are raised on a skim-solids basis. Import forecasts are unchanged for 2017.

Dairy product prices and Class prices for 2016 are adjusted to incorporate December price data. For 2017, butter, cheese, nonfat dry milk, and whey prices are raised from last month on demand strength. Class prices for 2017 are raised, reflecting higher product price forecasts. The all milk price range is raised to \$17.60 to \$18.40 per cwt.

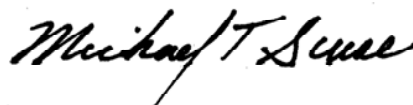

COTTON: The U.S. 2016/17 cotton outlook shows larger production, exports, and ending stocks relative to last month. Production is raised 435,000 bales to nearly 17.0 million, due mainly to higher production in Texas. Domestic mill use is unchanged, but exports are raised to 12.5 million bales and ending stocks to 5.0 million. The forecast range for the marketing year

average price received by producers is narrowed 1 cent on each end to 65 to 69 cents per pound, with the midpoint unchanged at 67 cents.

Larger production is the main factor driving a 1.5-million-bale increase in projected global 2016/17 ending stocks. In addition to the increase for the United States, production is raised 1.0 million bales for China, where inspection data indicates higher production than previously anticipated for the Xinjiang region, partially offset by a decrease for Pakistan, which is based on ginning arrivals. Consumption is reduced for India, Mexico, and Turkey, mostly offset by an increase for China. World trade is raised slightly, due mainly to higher projected imports by Pakistan and Bangladesh. Higher exports are projected for the United States and India, partially offset by decreases for Uzbekistan and Australia. World ending stocks are now projected at 90.6 million bales.

Approved by the Secretary of Agriculture and the Chairman of the World Agricultural Outlook Board, Seth D. Meyer, (202) 720-6030. This report was prepared by the Interagency Commodity Estimates Committees.

California 10/	21.60	18.30	13.00 - 14.00	13.00 - 14.00
Other States 1/	14.40	11.20	9.20 - 10.20	9.20 - 10.20

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 2014/15-1.9; 2015/16-2.9; 2016/17-2.9. 3/ Residual includes unreported use, processing losses, and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Includes rough rice and milled rice exports. Milled rice exports are converted to an equivalent rough basis. 5/ Expressed as a percent, i.e., the total quantity of whole kernel and broken rice produced divided by the quantity of rough rice milled. The 2014/15 and 2015/16 milling yield is based on the Farm Service Agency (FSA) warehouse stored loan data for long, medium, and short grain rice. The 2016/17 milling yield is calculated using the previous five-year Olympic average-- 2011/12-2015/16. 6/ Marketing-year weighted average price received by farmers. 7/ Includes imports. 8/ Exports by type of rice are estimated. 9/ The medium/short-grain seasonaverage- farm price (SAFP) largely reflects rice that is marketed through price pools in California. The pool price is not final until all the rice in the pool is marketed for the crop year. Therefore, SAFP forecasts based on the average of NASS monthly prices and the final price may differ. For example, the average difference between the August WASDE SAFP forecast and the final price has averaged \$1.65 per cwt from 2008/09-2013/14, with a high of \$3.50 per cwt in 2008/09 and a low of \$0.60 per cwt in 2009/10. 10/ Marketing year beginning October 1.

1/ Fiscal years beginning Oct 1. Historical data are from FSA "Sweetener Market Data" (SMD). 2/ Production projections for 2015/16 and 2016/17 are based on Crop Production and processor projections where appropriate. 3/ For 2016/17, WTO raw sugar TRQ shortfall (99). For 2015/16, WTO raw sugar TRQ shortfall (125) 4/ Includes sugar under the re-export and polyhydric alcohol programs. 5/ For 2014/15, other high-tier (15) and other (0). For 2015/16, other high-tier (16) and other (0). For 2016/17, other high-tier (15) and other (0). 6/For 2014/15, combines SMD deliveries for domestic human food use and SMD miscellaneous uses. 7/ Transfers to sugar-containing products for reexport, and for nonedible alcohol, feed, and ethanol.

1/ Data based on local marketing years except Argentina and Brazil which are adjusted to an October-September year. 2/ World imports and exports may not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use. 3/ Argentina, Brazil, Paraguay, and Uruguay. 4/ China, European Union, Japan, Mexico, and Southeast Asia (includes Indonesia, Malaysia, Philippines, Vietnam, and Thailand).

All Milk 3/	23.97	17.12	16.05- 16.15	16.20	16.85- 17.65	17.60- 18.40

1/ Simple average of monthly prices calculated by AMS from weekly average dairy product prices for class price computations. 2/ Annual Class III and Class IV prices are the simple averages of monthly minimum Federal order milk prices paid by regulated plants for milk used in the respective classes. All milk price is the simple average of monthly prices received by farmers for milk at average test. 3/ Does not reflect any deductions from producers as authorized by legislation.

WASDE - 561 - 35

Reliability of January Projections 1/

Note: Tables on pages 35-37 present a record of the January projection and the final Estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 0.7 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 1.2 percent. The average difference between the January projection and the final estimate is 3.1 million tons, ranging from 0 million to 8.3 million tons. The January projection has been below the estimate 26 times and above 9 times.

1/ See pages 35 and 36 for record of reliability for U.S. wheat, rice, soybeans, and cotton. Marketing years 1981/82 through 2015/16 for grains, soybeans, and cotton. Final for grains, soybeans, and cotton is defined as the first November estimate following the marketing year for 1981/82 through 2015/16. Calendar years 1982 through 2015 for meats, eggs, and milk. Final for animal products is defined as the latest annual production estimate published by NASS for 1982-2015.

Related USDA Reports

The *WASDE* report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the *WASDE* report provides a framework for more detailed reports issued by USDA's Economic Research Service and Foreign Agricultural Service. For more information on how the *WASDE* report is prepared, go to: <http://www.usda.gov/oce/commodity/wasde>.

Supply and Demand Database

The Foreign Agricultural Service publishes Production, Supply, and Demand Online, a comprehensive database of supply and demand balances by commodity for 190 countries and regions at <http://www.fas.usda.gov/psd/online>. Data for grains, oilseeds, and cotton are updated monthly and data for other commodities are updated less frequently.

Foreign Production Assessments

Preliminary foreign production assessments and satellite imagery analysis used to prepare the *WASDE* report are provided by the Production Estimates and Crop Assessment Division (PECAD) of the Foreign Agricultural Service. PECAD is located at www.pecad.fas.usda.gov/.

Metric Conversion Factors

1 Hectare = 2.4710 Acres

1 Kilogram = 2.20462 Pounds
